

Enterprise Data Analytics Report

Fragile States Index Analysis | Generated on May 24, 2026

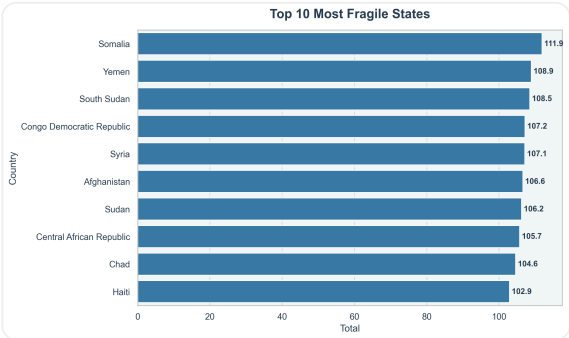

Executive Summary

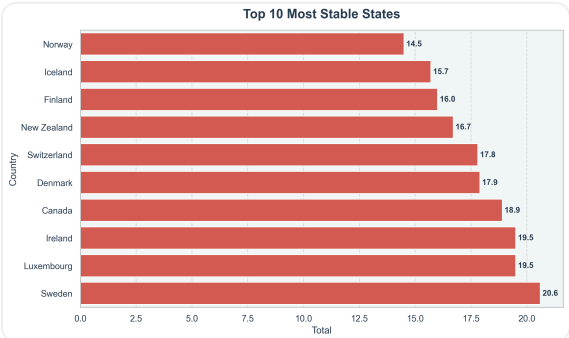

This automated enterprise report provides a comprehensive analysis of the Fragile States Index dataset. The data was cleaned, anomalies were handled, and machine learning (K-Means Clustering) was applied to categorize countries into distinct risk tiers.

Rankings Overview

Top 10 Most Fragile States

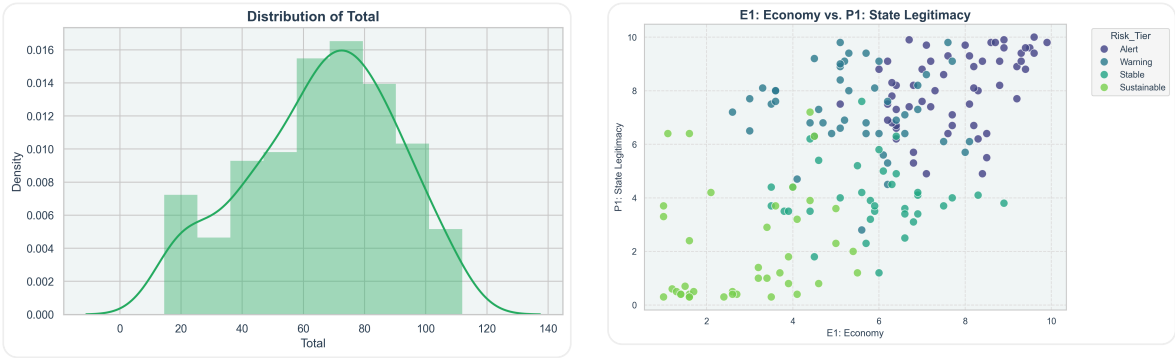

Top 10 Most Stable States

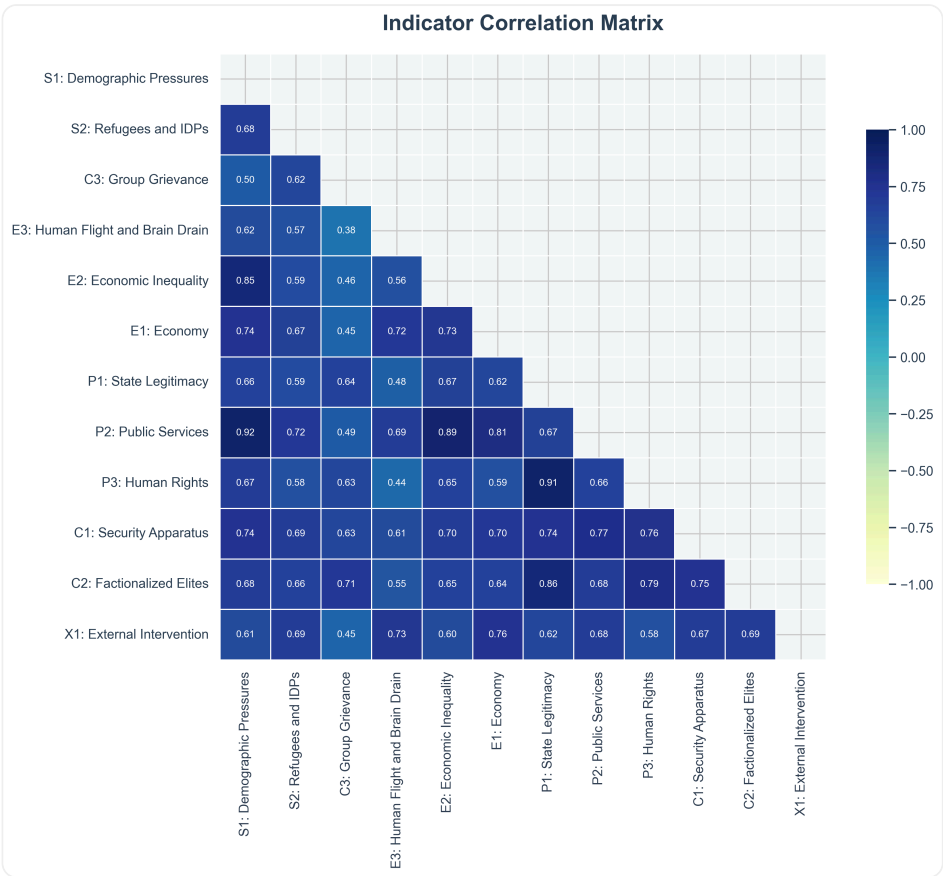

Statistical Distributions & Clustering

Countries were grouped into 4 distinct risk tiers based on 12 socio-economic and political indicators using K-Means Clustering.

Indicator Correlations

The correlation matrix below illustrates the relationships between various pressures, such as economic inequality, state legitimacy, and demographic pressures. A value closer to 1.0 indicates a strong positive correlation.

Data Sample (Top 5 Fragile)

Country	Rank	Total	Risk_Tier
Somalia	1	111.9	Alert
Yemen	2	108.9	Alert
South Sudan	3	108.5	Alert
Congo Democratic Republic	4	107.2	Alert
Syria	5	107.1	Alert
